OEM DESIGNED OIL SUPPLY AND CLEANING PRODUCTS

Topaze offers a variety of high-performance cleaning assemblies, designed to remove toner residues which accumulate on fuser rollers of toner printers and copiers. Some assemblies merely have a mechanical cleaning function, but most of them also dispense silicone oil onto the fuser roller.

Oil supply rollers:

A wide range of systems for applying silicone oil onto fuser rollers. Since the fuser area operates at temperatures of 200°C or above, all the materials used are designed to operate at these extreme temperatures. Aramid fibres resist high temperatures, so fabrics produced from these fibres are widely used to wrap around a core containing high-viscosity silicone oils. Depending on the customer requirements, a number of different oil storage media can be used, including paper, ceramic foams, felt, foam, and hollow shafts. A uniform and constant dispensing of the oil together with a continuous cleaning action are essential to ensure these components enjoy a long service life.

Oil cleaning webs:

Our high quality products are your guarantee of constant oiling and cleaning. The type of cleaning, temperature range and the required oil supply dictates the type of material to use. Available materials include nylon, polyester, aramid, Teflon and mixtures of these materials.

Topaze's oil supply and cleaning assemblies are mainly used by manufacturers of high performance office automation equipment, industrial components and medical equipment.

Typical Applications:

- High capacity laser printer cleaning webs
- Pressure roll cleaner pads
- Oil reservoir and lubricating wicks
- Desktop laser printer cleaning pads
- Copier/duplicator lubricating and cleaning rollers

Choose for maximum performance, reliability, continuous and consistent high quality product, and very reasonable price, choose Topaze to be your producer for oil supply rollers and cleaning webs.

All our products are manufactured according to stringent quality standards and are outperforming the products of our competitors

Look for these and other printer related products on our website, we can offer you a wide variety of services, including custom designed electro-mechanical and mechanical assemblies, high performance pressure- and fuser rollers. We have an in-house capability to design and produce our own automated assembly machines. We look forward to serving you!
